Outline

- ▶ Closed string in a weakly curved background
- ▶ Generalized T-dualization procedure
- ▶ T-dual backgrounds
- ▶ T-duality laws
- ▶ T-dualization diagram

Bosonic string in a weakly curved background

- ▶ Action for the closed string in the conformal gauge

$$g_{\alpha\beta} = e^{2F} \eta_{\alpha\beta}$$

$$S[x] = \kappa \int_{\Sigma} d^2\xi \partial_+ x^\mu \Pi_{+\mu\nu}(x) \partial_- x^\nu, \quad \partial_{\pm} = \partial_{\tau} \pm \partial_{\sigma}$$

- ▶ Background consists of metric tensor $G_{\mu\nu} = G_{\nu\mu}$ and Kalb-Ramond field $B_{\mu\nu} = -B_{\nu\mu}$

$$\Pi_{\pm\mu\nu}(x) = B_{\mu\nu}(x) \pm \frac{1}{2} G_{\mu\nu}(x)$$

- ▶ Space-time equations of motion

$$R_{\mu\nu} - \frac{1}{4} B_{\mu\rho\sigma} B_{\nu}{}^{\rho\sigma} = 0, \quad D_{\rho} B^{\rho}{}_{\mu\nu} = 0$$

- ▶ Weakly curved background

$$G_{\mu\nu}(x) = \text{const}, \quad B_{\mu\nu}(x) = b_{\mu\nu} + \frac{1}{3} B_{\mu\nu\rho} x^{\rho}, \quad b_{\mu\nu}, B_{\mu\nu\rho} = \text{const}$$

Generalized Buscher construction of a T-dual theory

- ▶ Old steps (applicable to backgrounds which do not depend on the coordinates which one T-dualizes):
 - ▶ Localize the global symmetry $\delta x^\mu = \lambda^\mu = \text{const}$
 - ▶ Introduce the gauge fields v_α^μ
 - ▶ Substitute the ordinary derivatives with the covariant ones

$$\partial_\alpha x^\mu \rightarrow D_\alpha x^\mu = \partial_\alpha x^\mu + v_\alpha^\mu$$

- ▶ Impose the transformation law for the gauge fields

$$\delta v_\alpha^\mu = -\partial_\alpha \lambda^\mu, \quad (\lambda^\mu = \lambda^\mu(\tau, \sigma))$$

- ▶ New step (enables T-dualization of every coordinate):
 - ▶ Substitute the coordinate x^μ by the invariant coordinate

$$\Delta x_{inv}^\mu \equiv \int_P d\xi^\alpha D_\alpha x^\mu = x^\mu - x^\mu(\xi_0) + \Delta V^\mu,$$

here

$$\Delta V^\mu \equiv \int_P d\xi^\alpha v_\alpha^\mu.$$

Generalized Buscher construction

- ▶ Old step:

- ▶ Require the equivalence with the initial theory
- ▶ Field strength

$$F_{\alpha\beta}^{\mu} \equiv \partial_{\alpha} v_{\beta}^{\mu} - \partial_{\beta} v_{\alpha}^{\mu}$$

must be zero

- ▶ Add the Lagrange multiplier y_{μ} term in the Lagrangian

- ▶ Result:

- ▶ Gauge invariant action

$$S_{inv} = \kappa \int d^2\xi \left[D_+ x^{\mu} \Pi_{+\mu\nu}(\Delta x_{inv}) D_- x^{\nu} + \frac{1}{2} (v_+^{\mu} \partial_- y_{\mu} - v_-^{\mu} \partial_+ y_{\mu}) \right]$$

- ▶ Fix the gauge $x^{\mu}(\xi) = x^{\mu}(\xi_0)$
- ▶ Gauge fixed action

$$S_{fix}[y, v_{\pm}] = \kappa \int d^2\xi \left[v_+^{\mu} \Pi_{+\mu\nu}(\Delta V) v_-^{\nu} + \frac{1}{2} (v_+^{\mu} \partial_- y_{\mu} - v_-^{\mu} \partial_+ y_{\mu}) \right]$$

Gauge fixed action

- ▶ Two equations of motion can direct the procedure either back to the initial action or forward to the T-dual action.
- ▶ For the equation of motion obtained varying the action over the Lagrange multipliers, the gauge fixed action reduces to the initial action.
- ▶ For the equation of motion obtained varying the action over the gauge fields one obtains the T-dual theory.
- ▶ Comparing the solutions for the gauge fields in these two directions, one obtains the T-dual coordinate transformation laws.

Complete T-dualization

- ▶ T-dual action

$$S[y] = \frac{\kappa^2}{2} \int d^2\xi \partial_+ y_\mu \Theta_-^{\mu\nu} (\Delta V^{(0)}(y)) \partial_- y_\nu$$

- ▶ T-dual background

$$\Theta_-^{\mu\nu} = -\frac{2}{\kappa} \left(G_E^{-1} \Pi_- G^{-1} \right)^{\mu\nu},$$

where $G_{\mu\nu}^E \equiv [G - 4BG^{-1}B]_{\mu\nu}$

- ▶ Argument $V^\mu = -\kappa \theta_0^{\mu\nu} y_\nu + (g^{-1})^{\mu\nu} \tilde{y}_\nu$

Original theory $S[x]$	\rightarrow	T-dual theory $S[y]$
Noether current j_μ^α		Topological current ${}^*j_\mu^\alpha = -\kappa \epsilon^{\alpha\beta} \partial_\beta y_\mu$
Conservation law = Equation of motion $\partial_\alpha j_\mu^\alpha = 0$		Conservation law = Bianchi identity $\partial_\alpha {}^*j_\mu^\alpha = 0$
T-dual of T-dual theory $S[x]$	\leftarrow	T-dual theory $S[y]$
Topological current $i^{\alpha\mu} = -\kappa \epsilon^{\alpha\beta} \partial_\beta x^\mu$		Noether current ${}^*j^{\alpha\mu}$
Conservation law = Bianchi identity $\partial_\alpha i^{\alpha\mu} = 0$		Conservation law = Equation of motion $\partial_\alpha {}^*j^{\alpha\mu} = 0$

Partial T-dualizations

- ▶ T-dualization along direction x^μ : T^μ
- ▶ T-dualization along dual direction y_μ : T_μ
- ▶ T-dualization along initial directions

$$\mathcal{T}^a = \circ_{n=1}^d T^{\mu_n}, \quad \mathcal{T}^i = \circ_{n=d+1}^D T^{\mu_n}, \quad \mathcal{T} = \circ_{n=1}^D T^{\mu_n}$$

- ▶ T-dualization along dual directions

$$\mathcal{T}_a = \circ_{n=1}^d T_{\mu_n}, \quad \mathcal{T}_i = \circ_{n=d+1}^D T_{\mu_n}, \quad \tilde{\mathcal{T}} = \circ_{n=1}^D T_{\mu_n}$$

$$\mu_n \in (0, 1, \dots, D-1)$$

T-duality diagram

- ▶ We show

$$\mathcal{T}^i \circ \mathcal{T}^a = \mathcal{T}, \quad \mathcal{T}_i \circ \mathcal{T}_a = \tilde{\mathcal{T}}, \quad \mathcal{T}_a \circ \mathcal{T}^a = 1$$

$$\mathcal{T}^a : S[x] \rightarrow S[x^i, y_a]$$

$$\begin{aligned} S_{fix}[x^i, v_{\pm}^a, y_a] &= \kappa \int d^2\xi \left[\partial_+ x^i \Pi_{+ij}(x^i, \Delta V^a) \partial_- x^j \right. \\ &+ \partial_+ x^i \Pi_{+ia}(x^i, \Delta V^a) v_-^a + v_+^a \Pi_{+ai}(x^i, \Delta V^a) \partial_- x^i \\ &\left. + v_+^a \Pi_{+ab}(x^i, \Delta V^a) v_-^b + \frac{1}{2}(v_+^a \partial_- y_a - v_-^a \partial_+ y_a) \right] \end{aligned}$$

Equations of motion:

$$\partial_+ v_-^a - \partial_- v_+^a = 0$$

$$\Pi_{\pm ai}(x^i, \Delta V^a) \partial_{\mp} x^i + \Pi_{\pm ab}(x^i, \Delta V^a) v_{\mp}^b + \frac{1}{2} \partial_{\mp} y_a = \pm \beta_a^{\pm}(x^i, V^a)$$

T-duality laws

- ▶ $\mathcal{T}^a : S[x] \rightarrow S[x^i, y_a]$
 - ▶ $\partial_{\mp} x^a \cong$
 $-2\kappa_i \tilde{\Theta}_{\mp}^{ab}(x^i, \Delta V^a(x^i, y_a)) \left[\Pi_{\pm bi}(x^i, \Delta V^a(x^i, y_a)) \partial_{\mp} x^i + \right.$
 $\left. \frac{1}{2} \partial_{\mp} y_b \mp \beta_b^{\pm}(x^i, V^a(x^i, y_a)) \right]$
 - ▶ $x^{(0)a} \cong V^{(0)a}(x^i, y_a)$
- ▶ $\mathcal{T}_a : S[x^i, y_a] \rightarrow S[x]$
 - ▶ $\partial_{\mp} y_a \cong -2\Pi_{\pm a\mu}(x) \partial_{\mp} x^{\mu} \pm 2\beta_a^{\pm}(x),$
 - ▶ $y_a^{(0)} \cong U_a^{(0)}(x)$

Action $S[x^i, y_a]$

$$\begin{aligned}
S[x^i, y_a] = & \kappa \int d^2\xi \left[\partial_+ x^i \bar{\Pi}_{+ij}(x^i, \Delta V^a(x^i, y_a)) \partial_- x^j \right. \\
& - \kappa \partial_+ x^i \Pi_{+ia}(x^i, \Delta V^a(x^i, y_a)) \tilde{\Theta}_-^{ab}(x^i, \Delta V^a(x^i, y_a)) \partial_- y_b \\
& + \kappa \partial_+ y_a \tilde{\Theta}_-^{ab}(x^i, \Delta V^a(x^i, y_a)) \Pi_{+bi}(x^i, \Delta V^a(x^i, y_a)) \partial_- x^i \\
& \left. + \frac{\kappa}{2} \partial_+ y_a \tilde{\Theta}_-^{ab}(x^i, \Delta V^a(x^i, y_a)) \partial_- y_b \right]
\end{aligned}$$

Argument:

$$\begin{aligned}
\Delta V^{(0)a}(x^i, y_a) = & -\kappa \left[\tilde{\Theta}_{0+}^{ab} \Pi_{0-bi} + \tilde{\Theta}_{0-}^{ab} \Pi_{0+bi} \right] \Delta x^{(0)i} \\
& - \kappa \left[\tilde{\Theta}_{0+}^{ab} \Pi_{0-bi} - \tilde{\Theta}_{0-}^{ab} \Pi_{0+bi} \right] \Delta \tilde{x}^{(0)i} \\
& - \frac{\kappa}{2} \left[\tilde{\Theta}_{0+}^{ab} + \tilde{\Theta}_{0-}^{ab} \right] \Delta y_b^{(0)} - \frac{\kappa}{2} \left[\tilde{\Theta}_{0+}^{ab} - \tilde{\Theta}_{0-}^{ab} \right] \Delta \tilde{y}_b^{(0)}
\end{aligned}$$

T-dual background fields

▶ Inverses:

$$\text{▶ } \tilde{\Theta}_{\pm}^{ab} \Pi_{\mp bc} = \Pi_{\mp cb} \tilde{\Theta}_{\pm}^{ba} = \frac{1}{2\kappa} \delta_c^a$$

$$\text{▶ } \bar{\Pi}_{\pm ij} \Theta_{\mp}^{jk} = \Theta_{\mp}^{kj} \bar{\Pi}_{\pm ji} = \frac{1}{2\kappa} \delta_i^k$$

▶ Effective metric

$$\tilde{G}_{Eab} \equiv G_{ab} - 4B_{ac}(\tilde{G}^{-1})^{cd} B_{db}$$

▶ Noncommutativity parameter

$$\tilde{\theta}^{ab} \equiv -\frac{2}{\kappa} (\tilde{G}_E^{-1})^{ac} B_{cd} (\tilde{G}^{-1})^{db}$$

$$\text{▶ } \tilde{\Theta}_{\pm}^{ab} = \tilde{\theta}^{ab} \mp \frac{1}{\kappa} (\tilde{G}_E^{-1})^{ab}$$

$$\text{▶ } \bar{\Pi}_{+ij} \equiv \Pi_{+ij} - 2\kappa \Pi_{+ia} \tilde{\Theta}_{-}^{ab} \Pi_{+bj}$$

T-dual background

- $$\begin{aligned} \bullet G_{ij} = \bar{G}_{ij} = G_{ij} - G_{ia}(\tilde{G}_E^{-1})^{ab}G_{bj} \\ - 2\kappa\left(B_{ia}\tilde{\theta}^{ab}G_{bj} + G_{ia}\tilde{\theta}^{ab}B_{bj}\right) - 4B_{ia}(\tilde{G}_E^{-1})^{ab}B_{bj} \end{aligned}$$
- $$\begin{aligned} \bullet B_{ij} = \bar{B}_{ij} = B_{ij} - \frac{\kappa}{2}G_{ia}\tilde{\theta}^{ab}G_{bj} - B_{ia}(\tilde{G}_E^{-1})^{ab}G_{bj} \\ - G_{ia}(\tilde{G}_E^{-1})^{ab}B_{bj} - 2\kappa B_{ia}\tilde{\theta}^{ab}B_{bj} \end{aligned}$$
- $$\bullet G^{ab} = (\tilde{G}_E^{-1})^{ab}$$
- $$\bullet B^{ab} = \frac{\kappa}{2}\tilde{\theta}^{ab}$$
- $$\bullet G^a_i = \kappa\tilde{\theta}^{ab}G_{bi} + 2(\tilde{G}_E^{-1})^{ab}B_{bi}$$
- $$\bullet B^a_i = \kappa\tilde{\theta}^{ab}B_{bi} + \frac{1}{2}(\tilde{G}_E^{-1})^{ab}G_{bi}$$

T-dual backgrounds

- ▶ geometric background

$$\Pi_{+\mu\nu}$$

- ▶ nongeometric background

- $\Pi_{+ij} = \bar{\Pi}_{+ij} = \Pi_{+ij} - 2\kappa\Pi_{+ia}\tilde{\Theta}_{-}^{ab}\Pi_{+bj}$

- $\Pi_{+i}{}^a = -\kappa\Pi_{+ib}\tilde{\Theta}_{-}^{ba}$

- $\Pi_{+i}^a = \kappa\tilde{\Theta}_{-}^{ab}\Pi_{+bi}$

- $\Pi_{+}^{ab} = \frac{\kappa}{2}\tilde{\Theta}_{-}^{ab}$

- ▶ nongeometric background

$$\Theta_{-}^{\mu\nu}$$
